Note:

The B.C. population estimates by age and gender that were released in December 2012 may not be comparable with those published in 2011 due to changes in the methodology. As a result, rates calculated based on 2012 population for some indicators in the Socio-Economic Profiles are not comparable to earlier years.

In a number of instances, the population estimates of certain age groups had to be substantially revised for some geographical areas. This change in the methodology was then applied consistently to all the estimates for the years between July 1, 2006 and July 1, 2012.

The new procedure of estimating sub-provincial population by age and gender is considered to be an improvement over the old method in the overall performance of the estimates.

Below is an example of the 2011 and 2012 estimates for the youth population in Local Health Area 165 (Vancouver Midtown):

Estimates for Those 12-17 and 18 Years of Age in Local Health Area 165, Vancouver Midtown

2011	5,508	9.2%	4,686	1.2%	931	24.1%	833	12.9%

Please note that all estimates are consistent with the preliminary and revised population estimates of B.C. from Statistics Canada. For more information about this change please contact: Frank Ip 250-387-0336 or Werner Grundlingh 250-387-8896.

In addition to the population estimates, it is also important to note that the counts (numerator) can also change considerably from year to year. Below is an example of the number of 18 year-olds in Local Health Area 10, Arrow Lakes who graduated from High School. To obtain the percent of 18-year-olds who did not graduate, the number of high school graduates is subtracted from the population estimate of 18-year-olds in the area and presented as a percentage. If there are significant changes in the counts from year to year or in the population estimates, the results can show extreme volatility or can even be negative.
